YONO - GTM Strategy

1. GTM PHASES SUMMARY

// Phase 1

Startup Urgency

Months 1-6

Industry:	DevOps & Cyber SaaS
Geography:	SF & NY Hubs
Size:	Series A-C (50-200 FTE)
Key Buyer:	CEO / CPO
Target ACV:	15K DP / 40K ARR
Primary Pain:	Engineering bandwidth

// Phase 2

Mid-Market Expansion

Months 7-16

Industry:	Profitable B2B SaaS
Geography:	United States
Size:	F1000-3000 / 150-500 FTE
Key Buyer:	CPO & CTO
Target ACV:	100K ARR
Primary Pain:	Product Adoption

// Phase 3

Up-Market Scale

Future Vision

Industry:	Enterprise Platforms
Geography:	US & Global
Size:	Fortune 500 Divisions
Key Buyer:	VP Product & CISO
Target ACV:	$150K+ ACV
Primary Pain:	Maintenance costs

Phase 1: Startup Urgency (Months 1–6)

REFERENCE PROOF ENGINE

// TARGET COHORT & ICP SIZING

Total Verified ICP Startups: **245 Companies**

San Francisco Bay Area: 170 active (100 Cyber / 70 DevOps)

New York Metropolitan Area: 75 active (50 Cyber / 25 DevOps)

// TARGET COHORT CRITERIA

B2B SaaS startups in the DevOps and Cybersecurity sectors at Series A-C stages with 50-200 employees (equivalent to an estimated 20-60 R&D headcount).

// ICP SELECTION RATIONALE (WHY DEVOPS & CYBER STARTUPS?)

Highly Complex Products: DevOps and Cybersecurity platforms feature dense graph UIs and complex workflows, where Yono's self-healing is most valuable.

Natural Language Adoption: Technical user bases in these sectors are already accustomed to command-line interfaces and natural language operations.

Impatient End Users: DevOps and cybersecurity professionals expect quick value and have low tolerance for complex, high-friction user interfaces.

Well-Funded Beachhead: Recently funded (Series A-C) DevOps and Cyber startups represent a stable, well-capitalized beachhead.

Phase 1 Metrics Dashboard

Platform success metrics proving initial engineering value.

Clicks Saved per Task

24 Clicks

average per task workflow

AST Schema Generation Time

96 Minutes

from GitHub repository connection to live sandbox

Clicks Saved per Task

`Manual UI Steps - Yono Steps`

WHAT:

Tracks the number of manual clicks and form fields bypassed by using natural language actions.

WHY:

Directly measures user friction reduction and speed to value, driving product engagement.

AST Schema Generation Time

`Connection to Sandbox Execution`

WHAT:

Tracks the time from initial GitHub repository connection to the creation of a verified AST schema and live sandbox execution.

WHY:

An empirical measurement of setup velocity, proving that Yono reverse-engineers codebase logic automatically, saving devs from months of manual API mapping and backend wrapper development. [⚠️ Aim: less than 12 hours]

// CONVERSION FUNNEL PIPELINE (TARGET: CLOSE 10 ACCOUNTS)

1. SEGMENT POOL	2. APPROACHED	3. DEMOS / MEETINGS	4. PILOTS / POVS	5. CLOSED ACCOUNTS
245	235	40	15	10
Target Segment	95.9% Contact Rate	17.0% Meeting Rate	37.5% Pilot Rate	66.7% Close Rate

// STEP-BY-STEP SALES EXECUTION FLOW

Step 1

Targeting & Triggers

Scrape active job posts (AI PM, Copilot Developer) and funding announcements.

Step 2

Outreach & Intro

Leverage US founder networks and VC introductions directly to the CPO/CEO.

Step 3

Demo & Yono Lite

Present a Yono Lite frontend sandbox to show automated execution on their own UI.

Step 4

Zero-DB Pilot

Run a 2-week local sandbox pilot. Bypasses database security checks to accelerate validation.

Step 5

Contract Close

Secure Design Partner agreements ($15K pilot ACV converting to $40K ARR).

// TARGET ACCOUNT SOURCED INDEX

TARGET STARTUP	LOCATION	FUNDING ROUND & DATE
Oasis Security	New York, NY	**Series A** ($35.0M) – January 22, 2026
Wordsmith	New York, NY	**Series B** ($70.0M) – June 3, 2026
Handle.com	San Francisco, CA	**Series B** ($27.0M) – May 25, 2026
Cinder	New York, NY	**Series B** ($41.0M) – May 13, 2026
Manifest OS	New York, NY	**Series A** ($60.0M) – April 30, 2026

// OUTBOUND SOURCING INDEX & TIMELINES

Network Outreach Approach: Our founder and VC network introduce Yono directly to peer companies. For VCs, this helps their portfolio companies operate more efficiently and leanly. For founders, it saves valuable engineering resources, allowing them to remain focused on building their core products.

Hiring Triggers: We monitor job boards for target startups hiring AI-related engineering roles, using these hiring triggers to launch cold outreach or secure warm introductions through our network.

TARGET ACCOUNT	LOCATION	FUNDING ROUND
Kodem	New York, NY	Series A ($18.0M) – April 23, 2026
Artemis	New York, NY	Series A ($70.0M) – April 15, 2026
depthfirst	San Francisco, CA	Series B ($80.0M) – March 31, 2026
BlueFlag Security	San Francisco, CA	Series A ($28.0M) – March 25, 2026
Qovery	San Francisco, CA	Series A ($13.0M) – March 24, 2026

Phase 2: Mid-Market Expansion (Months 7–16)

COMMERCIAL ICP CORE

// TARGET COHORT & ICP SIZING

Primary Public ICP Startups: **154 to 168 Companies**

Scale Profile: Fortune 1000 to 3000 tier (Avg $3B market cap)

Private Market Scale: 150-500 FTEs ($20M-$60M ARR)

// PRIVATE MARKET EXPANSION NOTE

Outbound sequences target private B2B SaaS platforms with 150–500 employees. Median headcounts stand at 165 for the $20M–$50M band, where ~30% of companies operate at net profitability.

// ICP SELECTION RATIONALE (WHY MID-MARKET SAAS?)

Stable Pipeline: Profitable mid-market SaaS companies represent stable, long-term clients with predictable software budgets.

Market Pressure to Innovate: With Gartner projecting natural language interfaces to reach 81% adoption at a 99.9% CAGR, mid-market companies must adapt quickly to stay competitive.

Legacy Architecture Constraints: Core software products were built for a traditional UI era, making custom action execution layers extremely difficult to both build and maintain in-house.

Phase 2 Metrics Dashboard

Platform adoption metrics driving software utilization.

Feature Discovery Rate

84.2%

vs. 6.5% legacy baseline

Cross/Upsell Opportunities Created

18.6%

contextual upgrade conversion rate

Feature Discovery Rate

`Premium Features via Language / Total Executions`

WHAT:

Measures the percentage of active users discovering secondary or premium features via language-driven execution paths rather than static UI navigation.

WHY:

Shows how natural language interfaces help users easily discover the full capability of the product, increasing feature utilization and overall adoption.

Cross/Upsell Opportunities Created

`Upgrade Conversions / Contextual Prompts`

WHAT:

Measures end-user conversion of contextual upgrade prompts triggered by high-intent, complex execution workflows.

WHY:

Directly drives expansion revenue by presenting upgrade options to users at the moment they need them most.

// CONVERSION FUNNEL PIPELINE (TARGET: CLOSE 35 ACCOUNTS)

1. SEGMENT POOL	2. APPROACHED	3. DEMOS / MEETINGS	4. POVS	5. INFOSEC CLEARED	6. CLOSED WON
1,200	500	100	60	45	35
Target Segment	41.7% Sourced Rate	20.0% Meeting Rate	60.0% POV Rate	75.0% Security Clear	77.8% Close Rate

// STEP-BY-STEP SALES EXECUTION FLOW

Step 1

Targeting & Scale

Filter Fortune 1000–3000 tier and profitable private B2B SaaS ($20M–$100M ARR).

Step 2

Outbound Prep

Deliver custom Yono Lite sandbox demos built with early success case-studies.

Step 3

Demo & Alignment

Align with the CPO (on user adoption and expansion) and CTO (on infrastructure).

Step 4

Technical POV

Run a 30-day technical POV mapping core complex workflows to show adoption metrics.

Step 5

Security & Close

Review SOC-2 compliance and configure customer-managed keys (BYOK) to close.

// TARGET MID-MARKET ACCOUNTS

TARGET MID-MARKET SAAS	LOCATION	SCALE / REVENUE
ClickUp	San Diego, CA	**~1,000 FTE** / $100M+ ARR
Vercel	San Francisco, CA	**~450 FTE** / $50M+ ARR
Sentry	San Francisco, CA	**~350 FTE** / $60M+ ARR
Algolia	San Francisco, CA	**~400 FTE** / $70M+ ARR
Auth0	Bellevue, WA	**~800 FTE** / $100M+ ARR

// COMMERCIAL EXPANSION NARRATIVE & MILESTONES

SaaS Product Stagnation: Mid-market software companies have stable budgets but face low feature utilization and product stagnation—an industry-wide SaaS challenge right now. Helping users easily discover secondary features directly drives adoption, unlocks expansion revenue, and protects Net Dollar Retention. To support runway growth, we collect payments annually in advance.

MONTH	MILESTONE FOCUS	KEY DIRECTIVES
Months 7-8	**Outbound Scaling**	Onboard GTM Rep #1. Extract mid-market lists and launch trigger-based campaigns.
Months 9-10	**Plugins & SOC-2 II**	Deploy WordPress/Shopify plugins and complete SOC-2 Type II audit.
Months 11-12	**CS Quota Guard**	Onboard GTM Success Rep #2. Secure advance annual cash collections.
Months 13-16	**$1.0M ARR Run-Rate**	Cross $1.0M ARR run-rate milestone (22 commercial accounts at $40K ARR + 8 Design Partners at $15K ARR).

Phase 3: Up-Market Scale (Future Vision)

ENTERPRISE SCALING

// TARGET COHORT & ICP SIZING

Target Enterprise Count: TBD

Scale Definition: Enterprise Platforms & Fortune 500 Divisions

Sourcing Stance: To be mapped and triaged post-Seed raise

// ENTERPRISE TARGET CRITERIA

Large technology divisions and Fortune 500 enterprises experiencing compounding developer resource drains spent maintaining custom copilot integrations.

// SOURCING & ALLIANCE CHANNELS

Step 1: Warm Network Mapping: Secure warm executive introductions from peer founder networks and partner connections directly to enterprise CPOs and CTOs.

Step 2: Channel Partner Program: Launch alliance playbooks with global systems integrators and enterprise development consultants.

Phase 3 Value Metrics

Long-term reliability and autonomous transaction metrics.

AST Auto-Sync Success

99.85%

UI selector auto-heals

M2M Transaction Success

99.98%

Autonomous user executions

AST Auto-Sync Success

`Auto-Healed UI Selectors / Total UI Updates`

WHAT:

Measures the reliability of automated UI selector mappings healing themselves during rapid product code updates.

WHY:

Mitigates ongoing developer maintenance overhead and prevents broken user automation pipelines.

M2M Transaction Success

`Successful Autonomous Actions / Total M2M Requests`

WHAT:

Tracks execution accuracy of autonomous machine-to-machine workflow transactions without human intervention.

WHY:

Secures high-margin enterprise process scale and enables high-volume transactional pricing models.

// POST-SEED ENTERPRISE VISION

Phase 3 represents our long-term enterprise scale and market consolidation. To maintain rigorous focus during the Pre-Seed stage, detailed funnel execution, step-by-step closing flows, and target accounts lists for Phase 3 will be mapped and triaged post-Seed raise.

Economic Rationale: Enterprise software divisions spend millions in engineering resources trying to build and support custom user action interfaces. Packaging Helm charts for private cloud deployment and offering SSO and customer-managed keys bypasses security concerns, turning custom builds into Yono platform accounts.

PACKAGING

Helm Deployments

Private cloud installation to satisfy data privacy.

COMPLIANCE

SSO / BYOK Encryption

Enterprise auth integration and customer-managed keys.

SCALE

M2M Transactions

Moving beyond human interfaces to support high-margin machine-to-machine integrations.

// LONG-TERM ENTERPRISE NARRATIVE & FUTURE MILESTONES

Enterprise SaaS divisions spend millions in engineering time building and supporting custom action endpoints. Offering private cloud deployment bypasses security reviews and converts expensive custom projects into Yono platform accounts. This phase enables true autonomous machine transactions.

MILESTONE	MILESTONE FOCUS	KEY DIRECTIVES
Milestone 1	**SSO & Seed Close**	Close Seed round. Deploy enterprise SSO, multi-tenant RBAC permissions, and team settings.
Milestone 2	**Enterprise Retention**	Secure contract renewals to lock enterprise customer accounts and protect Net Dollar Retention.
Milestone 3	**A2A Transactions**	Deploy self-healing AST delta sync engine to support automated machine-to-machine transactions. Launch Series A.

2. OPPORTUNITY COST CALCULATOR (STATIC MODEL)

Comparing the financial comparison of building and maintaining custom interfaces in-house vs. Yono's platform pricing.

// IN-HOUSE TEAM PROFILE (SAMPLE GROUP)

Engineering Team Size: 3 FTEs

Average Annual Compensation: $300,000

Build & Support Duration: Year 1 (6 months build + 6 months support)

// FINANCIAL SINK COMPARISON (3 FTE MODEL)

Raw Annual Salaries: $900,000

Recruitment & Overhead (25%): $225,000

Initial Build Cost (Year 1): $1,125,000

Annual UI Maintenance (40%): $450,000

Total In-House Sink: $1,575,000

Yono Standard Cost: $40,000 | Reclaimed Capital: $1,535,000

// IN-HOUSE FAILURE CASE STUDIES

COHORT / SCALE	R&D RESOURCES SPENT	OUTCOME & FAILURE MODE
Series C SaaS (Workflow)	**37.5 Dev-Months** (5 FTEs for 7.5 months)	Built only 4 basic agents. High resource burn with zero modular scaling capacity. Highly validates the massive resource drain of building LLMOps internally.
Series E Enterprise (Logistics)	**70-80 Engineers** for 7 months	Achieved zero product execution actions. System restricted entirely to delivery tracking.
Billion-Dollar SaaS (Marketing)	**18 Months** initial build + **40% dev tax**	Operational wrapper built, but consumes 40% of their platform team just to keep alive against UI updates.

3. OUTREACH & SOURCING CHANNELS

Leveraging network introductions and pre-configured Yono Lite demos to drive high outbound conversion.

`// Channel 1`

Network Dogfooding

Warm introductions to target company CPOs. Leveraging the founder's extensive network and founder contacts in the US market to secure warm entry points and bypass cold outbound walls.

`// Channel 2`

Tech-Trigger Outbound

Intercepting build plans. We scan boards for startups hiring AI PMs or Copilot Developers, pitching Yono before they allocate dev headcount.

`// Channel 3`

Yono Lite Demos

Pre-configured demo outreach. We reverse-engineer target frontends at the AST level prior to contact, sending functioning demos to CPOs/CEOs to prove value instantly.
